

# Carton Recycling

Recycling cartons is easy, all you have to do is make sure that they are empty and put them in your blue bag. Plastic caps are waste on PEI.

## What is a Food and Beverage Carton?

- Made mainly from paper, a renewable resource, light weight and compact, cartons have a low carbon footprint and are recyclable.

## What is NOT a food and beverage container?

- Frozen food boxes, egg cartons, takeout containers, and ice cream containers are not considered a food and beverage container. Dry (unsoiled) egg cartons go in recycled paper and soiled ones go in compost. Paper takeout containers go in compost. It depends on what types of materials make up the ice cream containers.

## Did you know...

- Recycled cartons are used to make new paper products that we use every day and are even used to make eco-friendly building materials.

Plastic lumber
